

How to choose my board ?

Strong points to pay attention at

- performances : which systems does the board support (and with which performance)
- cost
- size of the board : single board compute (SBC) versus computers
- transportability : some boards have a battery and a screen embedded
- gpio : do i want to plug hardware using the gpio

Resume

Board	Price	Performances	Systems availables (that are not common to all boards)	Specificities
rpi 1/2/3	< 50€	3/10		good gpio support
rpi4	< 50€	4/10	dreamcast, psp, saturn	good gpio support
c4	< 100€	4/10	dreamcast, psp, saturn	
n2+	< 150€	6/10	dreamcast, psp, saturn, gamecube (low performances)	
goa	< 100€	4/10	dreamcast, psp	portable
x86_64	from 30 to 1000€	from 5 to 10	dreamcast, psp, saturn, gamecube, wii, ps2	file browser

Performances examples

Board	System	Game	FPS	Comment
c4	saturn (lr-yabasanshiro)	bomberman	in game : 55 fps	
rpi4	saturn (lr-yabasanshiro)	bomberman	in game : 60 fps	no overclocking
-				
c4	dreamcast (lr-flycast)	unreal tournament	in game : 35-40 fps	
rpi4	dreamcast (lr-flycast)	unreal tournament	in game : 40-45 fps	
-				
c4	psp (ppsspp)	pes 2014	in game : 30/30 in x1	
-				
c4	psp (ppsspp)	pes 2014	in game : 30/30 in x2	
-				
c4	n64 (glide64mk2)	007	in game : 95-100%	
rpi4	n64 (glide64mk2)	007	in game : 95-100%	
-
