

Devices

This is all about devices that Batocera can be run on. You'll see there's quite a wide variety!

For traditional x86 full-tower desktop PCs (including benchmarks):

- [Choose a PC](#)

For traditional PC graphics cards and what's required to utilize them/activate their official drivers and features:

- [Supported PC GPU cards](#)

For ultra small form-factor (USFF)/next unit computer (NUC)/mini PCs specifically (although the above links refer to these as well):

- [USFF/NUC/Mini PC](#)

For single board computers such as the Raspberry Pi and the handhelds powered by them:

- [Choose a single board computer](#)

For handheld portable systems that are powered by lightweight SoCs (usually passively cooled and not that powerful, but completely quiet and light):

- [Choose a handheld](#)

For handheld PCs that are powered by traditional desktop x86 chips (they usually are larger and require active cooling):

- [Handheld PC](#)

For a list of compatible wireless dongles (when either your internal one isn't working or there is none):

- [Compatible wireless dongle list](#)

And a special section just for the Capcom Home Arcade (it's complicated):

- [Capcom Home Arcade](#)
