

Tested games with light gun support

Games were mainly tested on x86_64 and rpi4 architectures with default settings (except for MAME). Results may differ on other platforms. Updated frequently with latest builds testing results.

If a light gun game (**not** gamepad/mouse game) is missing and you tested it, add it to the list.

- HB = Homebrew game
- Unl = Unlicensed game

From Batocera **v36** and onwards, tested games will be pre-calibrated on first launch (existing calibration will not be overwritten). If you have a saved calibration for a game that is not already pre-calibrated and would like to contribute it to Batocera, feel free to upload it to <https://github.com/batocera-linux/lightguns-games-prec calibrations> or to #lightguns on the Discord server.

Arcade

MAME

Based on *working* and *imperfect* ROMs.
