

RetroArch offers a **Quick Menu** accessed by pressing [HOTKEY] +  which can be used to alter various things like RetroArch's basic settings, core options and [per-core controller mapping](#).

Config overrides and the use of RA options not available in ES yet are explained on [the advanced RetroArch configuration page](#).

## Troubleshooting

General troubleshooting can be done at the [generic support pages](#).

libretro offers extensive documentation on their own wiki, refer to [libretro's documentation](#) for the particular core that you are troubleshooting.
