

Emulators & Ports

What emulators are shipped with Batocera Linux? [Here is a spreadsheet that sums it up](#) on the main website.

With Batocera 29+, you can use the [pad2key](#) feature: it enables you to map your pad to keyboard keys, in order to play games on old computers, or [DOS](#) or [Windows](#) games that have sparse joypad support.

Emulators directory tree

Below you can find the structure of the emulators directories that sit in `/userdata/roms/`. In case you lose it, or in case there is a change/update when you upgrade your Batocera distribution, the current empty directory structure can always be found in `/usr/share/batocera/datainit/roms/`. Some emulators might not be available on your architecture (for instance, PS2/PS3 are only on Batocera PC, not on Raspberry Pis...)
