File Management

To transfer files via SSH protocol from a Windows computer to your Batocera machine:

- [WinSCP network file transfer](#)

If you've got a lot of disc-based media these pages will interest you:

- [Disc image formats/multi-disc](#)
- [Disc image/folder compression](#)

Batocera offers a variety of options for managing userdata (or share data as it's otherwise known). You can just use the drive you've got Batocera installed on, or:

- [Use external storage](#)
- [Use a NAS](#)

Refer to the [system's page](#) for info on its shortname (folder path in /userdata/roms/). The paths are easy enough to intuite however, and there's an `_info.txt` in each folder describing the system's full name.
