

ScreenSaver Behavior

Batocera currently provides 4 different screensaver modes:

- **Dim**: simply dims the screen
- **Black**: turns the screen full black (default)
- **Slideshow**: displays on full screen screenshots that have been scraped for the games available on your system (on rotation after a given time)
- **Random Video**: displays snap videos that have been scraped for the games available on your systems. If you press the Start button while a video is played, the associated game will be launched directly! Some call it "demo mode".
