

Storage Device

This displays where the system is looking for ROMs and other user data.

You can host your games on the internal storage or via a USB drive. The arrows on both sides of word "USB" or "Internal" indicate where the system is looking. You can easily change this by hitting left or right on the Dpad.

If things go wrong when you have roms stored on a different USB system than your system, you can [take a look at this page to help you fix it](#).
