

DAPHNE LaserDisc

DAPHNE is the **First Ever Multiple Arcade Laserdisc Emulator!**¹⁾ For legacy reasons, the [Hypseus fork](#) of the emulator may be referred to as simply DAPHNE.

DAPHNE

A LaserDisc video game is an [arcade](#) game that uses pre-recorded video (either live-action or animation) played from a LaserDisc. The first LaserDisc video game was Sega's Astron Belt released in 1983. The genre was popularized by Dragon's Lair released shortly after in the same year. The usage of LaserDiscs provided graphics close to an animated or live-action film which was vastly ahead of other arcade games at the time. However, with the drawback of limited interactivity compared to regular arcade games.

Cool website about Laserdisc games:
<http://www.dragons-lair-project.com/games/>

Another useful resource is AmberElec's wiki entry on it:
<https://amberelec.org/System-Laserdisc.html>

This system scrapes metadata for the daphne, arcade group(s) and loads the daphne set from the currently selected theme, if available.

Quick reference

- **Emulator:** [DAPHNE/Hypseus](#)
- **Folder:** /userdata/roms/daphne
- **Accepted ROM formats:** .daphne .squashfs

BIOS

No Daphne emulator in Batocera needs a BIOS file to run.

ROMs

Place your DAPHNE ROMs in /userdata/roms/daphne/.

The file structure consists of a directory with the ending .daphne and a corresponding .zip file in the folder roms:

```
roms
```

```

|-- daphne
|   |   (The folder below holds a laserdisc...".daphne"
|   |   tells emulationstation to add this to the menu,
|   |   and "dle21" tells daphne to use that game engine)
|   |
|   |-- dle21.daphne
|   |   |-- dle21.commands (Optional extra command-
|   |   |                   line params!)
|   |   |-- dle21.txt      (Framefile)
|   |   |-- lair.m2v
|   |   |-- lair.ogg
|   |
|   |                   (All roms go into this roms folder)
+-- roms
   |-- dle21.zip

```

Without the additional .zip file in the roms folder the games will be recognized by Batocera but will not be playable!

Emulators

DAPHNE/Hypseus

DAPHNE is the most famous emulator for LaserDisc arcade games. It supports more games than MAME. We use the [Hypseus Singe](#), a fork of the [original DAPHNE emulator](#).

DAPHNE/Hypseus configuration

Standardized features available to all cores of this emulator: `daphne.videomode`, `daphne.ratio`, `daphne.padtokeyboard`

ES setting name batocera.conf_key	Description ⇒ ES option key_value
Settings that apply to all cores of this emulator	
BILINEAR FILTER <code>daphne.bilinear_filter</code>	⇒ On 0, Off 1.
BLEND SPRITES (SINGE) <code>daphne.blend_sprites</code>	Restore BLENDMODE outline on Singe sprites ⇒ Off 0, On 1.
OVERSIZE OVERLAY (SINGE) <code>daphne.lightgun_hd</code>	Use with Singe HD lightgun games ⇒ Off 0, On 1.
INVERT AXIS <code>daphne.invert_axis</code>	Invert joystick on flight games ⇒ Off 0, On 1.

Command line parameters

In roms/daphne/<game>.daphne/<game>.commands, extra command line parameters can be define. For example, for Dragon's Lair in roms/daphne/lair.daphne/lair.commands:

[lair.commands](#)

```
-nocrc -noissues -nolog -noserversend -latency 950 -x 640 -y 480 -bank 1 00110111 -bank 0 10011000
```

Controls

Here are the default Daphne's controls shown on a [Batocera Retropad](#):

Gamepad	Arcade
SELECT	Input Coin
START	START Player 1
A	Action Button
X	DAPHNE Overlay
D-pad	Stick

Troubleshooting

Further troubleshooting

For further troubleshooting, refer to the [generic support pages](#).
