Emulators

libretro/mgba

mGBA is an emulator for running Game Boy Advance games. It aims to be faster and more accurate than many existing Game Boy Advance emulators, as well as adding features that other emulators lack. It also supports Game Boy and Game Boy Color games.

We use the latest [libretro](#) core. See the [official documentation](#) for more information.

Configuration

setting	description	recommendation
gba.skip_bios_mgba	Skips the BIOS intro when a BIOS is present in Batoceras BIOS directory is used.	Disable if you don't want to see the BIOS animation.
gba.solar_sensor_level	Can be used by games that employed the use of a solar sensor on their cartridges.	Use it for the few solar sensor games available

libretro/vba-m

VBA-M is a Game Boy Advance emulator with the goal to improve upon VisualBoyAdvance by integrating the best features from the various builds floating around. It also supports Game Boy, Game Boy Color and Super Game Boy (borders, palette).
