

Nintendo Game Boy Advance

GAMEBOY ADVANCE

The Game Boy Advance (often shortened to GBA) is a 32-bit handheld video game console developed by Nintendo. It is the successor to the Game Boy Color. It was released in Japan on March 21, 2001; in North America on June 11, 2001; in Australia and Europe on June 22, 2001. It has a ARM7TDMI CPU at 16.78 MHz and a Zilog Z80 CPU at 8 MHz and 4 MHz. It has 32KB of RAM and 96KB of VRAM.

This system scrapes metadata for the “gba” group and loads the gba set from the currently selected theme, if available.

BIOS

BIOS files are optional for GBA emulation, however they are the only way to see the cool boot animation on start-up.

Emulators

RetroArch

[RetroArch](#) (formerly SSNES), is a ubiquitous frontend that can run multiple “cores”, which are essentially the emulators themselves. The most common cores use the [libretro](#) API, so that's why cores run in RetroArch in Batocera are referred to as “libretro/(core name)”. RetroArch aims to unify

the feature set of all libretro cores and offer a universal, familiar interface independent of platform.

RetroArch configuration

RetroArch offers a **Quick Menu** accessed by pressing [HOTKEY] +  which can be used to alter various things like [RetroArch and core options](#), and [controller mapping](#). Most RetroArch related settings can be altered from Batocera's EmulationStation.

Standardized features available to all libretro cores: `gba.videomode`, `gba.ratio`, `gba.smooth`, `gba.shaders`, `gba.pixel_perfect`, `gba.decoration`, `gba.game_translation`

THREADED VIDEO <code>gba.video_threaded</code>	Improves performance at the cost of latency and more video stuttering. Use only if full speed cannot be obtained otherwise. ⇒ On <code>true</code> , Off <code>false</code> .

libretro/mGBA

mGBA is an emulator for running Game Boy Advance games. It aims to be faster and more accurate than many existing Game Boy Advance emulators, as well as adding features that other emulators lack. It also supports Game Boy and Game Boy Color games.

We use the latest [libretro](#) core. See the [official documentation](#) for more information.
