

PrBoom

Batocera is shipped with the SHAREWARE version of Doom. So you can play Episode 1 of this insane 3rd person shooter from 1993.

This system scrapes metadata for the “prboom” group(s) and loads the prboom set from the currently selected theme, if available.

Grouped with the “ports” group of systems.

Quick reference

- **Emulator:** [RetroArch](#)
- **Core:** [libretro: prboom](#)
- **Folder:** /userdata/roms/prboom
- **Accepted ROM formats:** .wad, .iwad, .pwad

BIOS

No PrBoom emulator in Batocera needs a BIOS file to run.

Game files

Batocera comes with the shareware version of Doom. It relies on this to run any [other WADs](#) at all. This “base” WAD can be replaced with a commercial copy of the game's WAD.

When adding .wad files, make sure you put the filenames in lowercase. Uppercase .WAD won't work.

Emulators

RetroArch

[RetroArch](#) (formerly SSNES), is a ubiquitous frontend that can run multiple “cores”, which are essentially the emulators themselves. The most common cores use the [libretro](#) API, so that's why cores run in RetroArch in Batocera are referred to as “libretro: (core name)”. RetroArch aims to unify

the feature set of all libretro cores and offer a universal, familiar interface independent of platform.

RetroArch configuration

RetroArch offers a **Quick Menu** accessed by pressing [HOTKEY] +  which can be used to alter various things like [RetroArch and core options](#), and [controller mapping](#). Most RetroArch related settings can be altered from Batocera's EmulationStation.

Standardized features available to all libretro cores: prboom.videomode, prboom.ratio, prboom.smooth, prboom.shaders, prboom.pixel_perfect, prboom.decoration, prboom.game_translation

ES setting name batocera.conf_key	Description ⇒ ES option key_value
Settings that apply to all cores of this emulator	
GRAPHICS BACKEND prboom.gfxbackend	Choose your graphics rendering ⇒ OpenGL opengl, Vulkan vulkan.
AUDIO LATENCY prboom.audio_latency	Audio latency in milliseconds, turn it up if you hear crackles ⇒ 256 256, 192 192, 128 128, 64 64, 32 32, 16 16, 8 8.
THREADED VIDEO prboom.video_threaded	Improves performance at the cost of latency and more video stuttering. Use only if full speed cannot be obtained otherwise. ⇒ On true, Off false.

libretro: PrBoom

libretro: PrBoom configuration

ES setting name batocera.conf_key	Description ⇒ ES option key_value
Settings that apply to all systems this core supports	
VIDEO RESOLUTION global.prboom-resolution	Smooth out jagged edges on 3D object polygons ⇒ 320×200 320×200, 640×400 640×400, 960×600 960×600, 1280×800 1280×800, 1600×1000 1600×1000, 1920×1200 1920×1200, 2240×1400 2240×1400, 2560×1600 2560×1600.
CONTROLLER TYPE global.prboom_controller1	Select controller type ⇒ Gamepad Classic 1, Gamepad Modern 773, Keyboard + Mouse 3.

Additional configuration /userdata/saves/prboom/[DOOM-EPISODE]/prboom.cfg.

Wiggle Fix

On some ARM platforms, floor and ceilings got some disruptive graphics output. Disabling it

completely gets rid of the effect. This screenshot illustrates the problem at full effect! This is due to some fix for texture “vibrations” (not exactly the same issue as the wiggle but triggered with the same option) the fix was backported from prboom-plus but it seems it's causing trouble in some platforms.

So how to fix? Start PRBOOM → Options → General → 3rd page Whiggle fix → No

Another method? Yes, navigate to /userdata/saves/prboom/[D00M-EPISODE]/prboom.cfg and search Video Section for *r_wiggle_fix* and disable it.

```
## Video settings
#screenblocks                0
#usegamma                    0
#uncapped_framerate          3
#filter_wall                 1
#filter_floor                1
#filter_sprite               1
#filter_z                    1
#filter_patch                 1
#filter_threshold             49152
#sprite_edges                0
#patch_edges                  0
#render_stretchsky           1
r_wiggle_fix                  0
```

Add Additional WADs (PWADs)

General: IWAD = Internal Where's All the Data and PWAD = Patch Where's All the Data.

So in general IWADs are standalone files and can be started by themselves. They MUST NOT be renamed.

Known IWADs so far:

GAME NAME	WAD NAME	md5
Doom v1.9	doom.wad	cd63c5ddff1bf8ce844237f580e9cf3
Doom - TNT Evilution v1.9	tnt.wad	4e158d9953c79ccf97bd0663244cc6b6
Doom 2 Hell on Earth v1.9	doom2.wad	25e1459ca71d321525f84628f45ca8cd
Doom 2 - Plutonia Experiment	plutonia.wad	75c8cf89566741fa9d22447604053bd7
Ultimate Doom	doomu.wad	c4fe9fd920207691a9f493668e0a2083
FreeDoom Part1 (Doom Ultimate free plot)	freedoom1.wad	91DE79621A393A08C39A9AB2C034B766
FreeDoom Part2 (Doom2 free plot)	freedoom2.wad	DD9C9E73F5F50D3778C85573CD08D9A4

PWADs can be renamed. Some example of known PWADs:

GAME NAME	(P)WAD NAME	IWAD ASSOCIATED	MD5
Doom 1 Episode 5 - SIGIL	SIGIL_v1_21.wad	doom1.wad	743d6323cb2b9be24c258ff0fc350883
Doom 1 Episode 6 - SIGIL II	SIGIL_II_V1_0.WAD	doom1.wad	d0442f5a75f2faef3405c09a0c3acc58
Doom 2 - No Rest for the Living	nerve.wad	doom2.wad	967D5AE23DAF45196212AE1B605DA3B0
Goldeneye 007	goldeneye.wad	doom2.wad	EF1E338364A1196533635698AF997A94

File Management

I suggest creating multiple folders for each IWAD like :

```
roms\prboom\Doom
roms\prboom\Doom 2
roms\prboom\Doom Ultimate
...
```

In each of these folder, just put the IWAD associated in it.

```
roms\prboom\Doom\doom.wad
roms\prboom\Doom 2\doom2.wad
roms\prboom\Doom Ultimate\doomu.wad
...
```

Now if you are going to use some mods and PWAD, just do a folder in the associated IWAD. For example:

```
roms\prboom\Doom\doom.wad
roms\prboom\Doom\Chex Quest\CHEX.wad
roms\prboom\Doom\Episode 5 - Sigil\SIGIL_v1_21.wad
...
```

That way, PWADs will use the main IWAD file in their parent folder.

Tweaking options

PrBoom allows to use a `prboom.cfg` file to apply to games recursively.

So if you put a `prboom.cfg` in `\roms\prboom\prboom.cfg`, it will apply to every game in `roms\prboom\` and subfolders.

For example, I noticed that most WAD mods have a too low brightness. In order to fix that, you can create a `prboom.cfg` file with `Video→usegamma 0/1/2/3/4`.

Click to open

```
# Doom config file
#
# Format:
#  variable    value
#
# Lines starting with '#' are comments
# When saved, default values are commented out

Other examples for specific WADs

Sigil (5th Episode) & Sigil II (6th Episode)

SIGIL was released on 31th Mai in 2019, whereas SIGIL II released on December 2023 on the 30th anniversary of this iconic game. They can be considered as the official 5th Episode and 6th Episode for ULTIMATE DOOM. They were created by the famous author of DOOM - John Romero and both parts can be [downloaded for free right here](#).

How to use?

Place the downloaded WADs to your prboom directory in roms. Now edit /userdata/saves/prboom/[DOOM1-EPISODE]/prboom.cfg and set the WAD next to be loaded to the main WAD in *Files Section*. I've only tested for ULTIMATE DOOM and it worked like a charme, you are greeted with a nice intro screen and you have the Ultimate DOOM with now six episodes in total.

```
## Files
wadfile_1          "SIGIL_v1_2.wad"
wadfile_2          "SIGIL_II_V1_0.WAD"
#wadfile_3         " "
#wadfile_4         " "
#wadfile_5         " "
#wadfile_6         " "
#wadfile_7         " "
#wadfile_8         " "
#dehfile_1         " "
#dehfile_2         " "
```

Lost Episodes of Doom

The Lost Episodes of Doom is a collection of three eight-level episodes for Doom by Christen Klie and Bob Carter. It takes place on the Jovian moons Callisto and Io, and on Jupiter itself. It was a commercial product.

Extract the two WAD files and then edit /userdata/saves/prboom/[DOOM1-EPISODE]/prboom.cfg and set the WAD next to be loaded to the main WAD in *Files Section*.

```
## Files
wadfile_1          "JPTR_V40.WAD"
wadfile_2          "Jptr_fix.wad"
#wadfile_3         " "
#wadfile_4         " "
#wadfile_5         " "
#wadfile_6         " "
#wadfile_7         " "
#wadfile_8         " "
#dehfile_1         " "
```

```
#dehfile_2          " "
```

Doom 2 - No Rest for the Living

No Rest for the Living was developed by Nerve Software for the release of Doom 2 on the XBLA. The episode consists of nine levels in all, eight standard levels and a single secret level, as a homage to the similarly structured nine-map episodes in the original Doom, particularly Knee-Deep in the Dead.

Extract the WAD file and then edit /userdata/saves/prboom/[D00M2-EPISODE]/prboom.cfg and set the WAD next to be loaded to the main WAD in *Files Section*.

```
## Files
wadfile_1          "NERVE.WAD"
#wadfile_2          " "
#wadfile_3          " "
#wadfile_4          " "
#wadfile_5          " "
#wadfile_6          " "
#wadfile_7          " "
#wadfile_8          " "
#dehfile_1          " "
#dehfile_2          " "
```

Additional tricks

The above methods got the disadvantage that you “lose” your original gameset. That means for DOOM-Sigil that you will the new launching screen ever and ever again. To get rid of this you can copy the main WAD and rename one to DOOM - Ultimate DOOM.wad and the other to DOOM - Sigil of Baphomet.wad now you edit /userdata/saves/prboom/DOOM - Sigil of Baphomet.wad/prboom.cfg and set it up like written above.

Now you edit gamedata and hide the added PWAD files (Sigil.wad), you now have a clean list.

Enhanced music

PrBoom can let you add enhanced music, like back in the 90s when using a SC-55 synthesizer to render the music tracks. Some of these tunes have been recorded and can be found on the Internet (Google is your friend).

Once you downloaded the tracks that you want to add, you need to update the config file from the Doom game you want to change musics for. Its location follows always the same pattern, for example /userdata/saves/prboom/[D00M1-EPISODE]/prboom.cfg/prboom.cfg for DOOM1. You need to add/modify the section:

```
## Music
#mus_bunny          "bunny.mp3"
#mus_e1m1            "e1m1.mp3"
```

```
#mus_e1m2          "e1m2.mp3"
#mus_e1m3          "e1m3.mp3"
. . .
```

Controls

Here are the default PrBoom's controls shown on a [Batocera Retropad](#):
