

# Bandai WonderSwan Color

The WonderSwan Color is a handheld game console designed by Bandai released in 2000, and was only available in Japan. While the original WonderSwan had only a black and white screen, the color version features 64k of RAM and a larger color LCD screen.

Prior to WonderSwan's release, Nintendo had a practical monopoly in the Japanese handheld market. After the release of the WonderSwan Color, Bandai took approximately 8% of the market share in Japan, partly due to its low price.

## Emulators

### libretro/mednafen\_wswan

Batocera uses the standalone port [Beetle Cygne](#) based on Mednafen. Mednafen's WonderSwan emulation is based on [Cygne](#), modified with bug fixes and to add sound emulation.

## ROMs

Place your WonderSwan Color ROMs in `/userdata/roms/wswanc/`.

## Controls

The default button mapping to the WonderSwan Color is 1-to-1. It has the exact button layout as a [Nintendo Game Boy](#). You can rotate the screen with the `Select` button.
