

Batocera Systems

Batocera supports many consoles, platforms and emulation related applications. To separate them they are divided into systems, which are used as a unique identifier across the whole Batocera landscape.

This page gives an overview over all available and supported systems including their unique system shortname (same as their ROM folder name, most of the time!), the full system name, the manufacturer and release date. The systems are categorized by their hardware type and sorted in ascending order according to their release date.

Take a look at our [compatibility list](#) to see which system is supported on a platform and what emulator/core is used.

If you need a tool to organize your ROM collection, there are some tips at the top of the [add games/BIOS page](#).

Arcade

Video game arcades were venues where multiple (usually game-specific) cabinets were set up for public use, often containing hundreds of games. These typically charged per “play”, which usually consisted of a single attempt at the game with limited lives, usually set up in such a way to boot the player off after a certain amount of time (unless they were willing to toss more coins into the machine). Due to each arcade cabinet essentially being its own “system”, most arcade emulators focus on emulating many systems in one program, the scope of which varies between projects.

Before delving into any of the emulator-specific (or to phrase it better, “multiple machine emulators”) pages, be sure to read the [arcade guide](#) first.

System short name	Full name/alternative names	Release period	Manufacturer
mame	Multiple Arcade Machine Emulator	19??-current	Various
fbneo	FinalBurn Neo	19??-current	Various
dice	Discrete Integrated Circuit Emulator	1972-1977	Various
daphne	DAPHNE (Laserdisc)	1978-????	Various
singe	SINGE	1978-????	Various
namco22	Namco System 22	1992	Namco
mame/model1	Sega Model 1	1992-1994	Sega
model2	Sega Model 2	1994-1998	Sega

cave3rd	Cave CV1000	2004-2012	Cave
systemsp	Sega System SP	2004-????	Sega
lindbergh	 Sega Lindbergh	2005-2008	Sega

Home console

Home video game consoles were targeted mainly for the consumer market and are usually sold on a five to seven year cycle, with consoles made with similar technical capabilities or made around the same time period grouped into the  **generations**. Note that generation definitions aren't a rigid definition of power; some consoles from a particular generation were a lot more/less powerful than others in the same generation. It's more about its time of release.

System short name	Full name/alternative names	Release date	Manufacturer
First/second generation (the jank era)			
gong	 Pong	1972	Various
channelf	 Fairchild Channel F	1976	Fairchild

vircon32	Vircon32 virtual console	2021	Carra

Portable game console

Portable game consoles are handheld units with a built-in screen, controls and speakers usually capable of running multiple cartridges. [Portable game console generations](#) are in reference to their time of release alongside home consoles; in terms of power consider them a generation and a half behind. Earlier handheld LCD games were typically made to run one built-in game and maybe also work as a [watch](#), but not much else.

System short name	Full name/alternative names	Release date	Manufacturer
Handheld LCD games			
gameandwatch	 Game & Watch	1980	Nintendo
lcdgames	 Handheld LCD Games	19xx/20xx	Various
gamepock	 Game Pocket Computer	1984	Epoch
Fourth generation

vis	 Tandy Video Information System	1992	Tandy / Memorex
msxturbor	 Microsoft MSX turboR	1993	Microsoft
commanderx16	Commander X16	2019	David Murray

Port, Flatpak & Miscellaneous

Instead of a full system emulator ports often concentrate on a particular game or game engine. Batocera supports several (source) ports, game engine recreations and new game engines.

Batocera supports the installation of flatpaks in a limited capacity. Some flatpaks have become officially integrated as optional packages, which are listed below.

Batocera also supports different additional applications that can be used to play software and games from other systems like DOS or Windows. If you're having difficulty running Windows apps using WINE specifically, refer to [the WINETricks page](#). This is also where the few special emulator-specific pages are noted.

System short name	Full name/alternative names	Description
ports	Native ports	Contains both manually install native Linux games, grouped for convenience
flatpak	Flatpak	Install native Linux software, grouped with ports
steam	Steam	Valve's PC game distribution store, grouped with ports. Has official Batocera integration (Steam games will automatically appear in Ports when installed)
dos	DOSbox	x86 emulator DOSBox for old DOS games
flash	Flashpoint	Flash player for playing Adobe Flash based games
moonlight	Moonlight	Open source implementation of NVIDIAs GameStream protocol
vgmplay	MAME Video Game Music Player	Play retro video game music using emulated sound chips
windows	WINE	Play Windows-only games using WINE, grouped with ports (WINE is not an emulator)
abuse	Abuse SDL	A dark 2D side-scrolling platform game, now public domain and maintained by the community
bennugd	BennuGD	A high-level, open-source game development suite
bstone	Blake Stone	Source port of Blake Stone: Aliens of Gold and Planet Strike
cannonball	Cannonball	Enhanced OutRun Engine

System short name	Full name/alternative names	Description
catacomb	CatacombGL	CatacombGL is a source port with OpenGL graphics for Catacomb 3D and its successors
cavestory	Cave Story	A free pixel styled 2D platformer
cdogs	C-Dogs	A classic overhead run-and-gun game, supporting up to four players in co-op and deathmatch modes
cgenius	Commander Genius	Source port of Commander Keen engine
corsixth	CorsixTH	Open source clone of Theme Hospital
devilutionx	DevilutionX	Source port of Diablo and Hellfire
doom3	Doom 3 BFG	Source port of Doom 3 BFG Edition
dxx-rebirth	DXX-Rebirth	Source port of Descent and Descent 2 - one of the first FPV shooters using polygone objects
easyrpg	EasyRPG	RPG Maker compatible RPG engine
ecwolf	ECWolf	Source port for Wolfenstein 3D engine
eduke32	EDuke32	A cross-platform port of Duke Nukem 3D
etlegacy	ET: Legacy	Open source port of Wolfenstein: Enemy Territory
fallout1-ce	Fallout CE	A re-implementation of Fallout with some Community expansions
fallout2-ce	Fallout2 CE	A re-implementation of Fallout 2 with some Community expansions
fury	Ion Fury	Ion Fury is built on EDuke32, and a fork of the Build engine
gzdoom	GZDoom	GZDoom is a source port, has full support for Boom, Chex Quest, Heretic, Hexen and Strife.
halflife	Half-Life 1	Source port for playing Half-Life 1 using Xash3D FWGS engine
hcl	Hydra Castle Labyrinth	An indie 2D action platformer inspired by classic games like Metroid and Castlevania.
hurrican	Hurrican	A freeware 2D action platformer game developed by Poke53280
ikemen	Ikemen Go	A reimplementaion of IKEMEN, an engine which extends the capacities of MUGEN for fighting games
jazz2	Jazz Jackrabbit 2	Source port of Jazz Jackrabbit 2
jkdf2	Jedi Knight: Dark Forces II	Open source port of Star Wars: Jedi Knight - Dark Forces II
jknight	Star Wars: Jedi Academy	Open source port of Star Wars Jedi Knight: Jedi Academy
lutro	Lutro	A retro-inspired 2D game engine for Libretro
mohaa	Medal of Honor: Allied Assault	Source port of Medal of Honor: Allied Assault
mrboom	Mr. Boom	8 player Bomberman clone
mugen	M.U.G.E.N	Game engine for fighting games
openbor	Open Beats of Rage	Open source port of Beats of Rage, a 2D beat-em-up game engine
openjazz	Openjazz	Open-source version of the classic Jazz Jackrabbit
prboom	PrBoom	a.k.a. Proff Boom, ports of classic Doom-based games to PrBoom (based on the source port Boom)

System short name	Full name/alternative names	Description
pygame	pygame	Python based engine designed for writing video games
quake	Quake	Source port of Quake engine
quake2	Quake II	Source port of Quake II engine
quake3	Quake III Arena	Source port of Quake III Arena
raze	Raze	A fork of build engine games that combines Duke Nukem 3D, Blood, Redneck Rampage, Shadow Warrior and Exhumed/Powerslave in a single package
reminiscence	REminiscence	Port of Gregory Montoir's Flashback emulator, running as a libretro core.
rott	Rise of the Triad	Source port of Rise of the Triad
rtcw	Return to Castle Wolfenstein	Source port of Return to Castle Wolfenstein
scummvm	ScummVM	Source port for adventure and role-playing games like Monkey Island series
sdlpop	SDLPoP	An open-source port of Prince of Persia, based on the disassembly of the DOS version
solarus	Solarus	A game engine for 2D Action RPGs designed with 16-bit era in mind
sonic-mania	Sonic Mania	Decompilation of Sonic Mania
sonic3-air	Sonic 3 A.I.R.	Angel Island Revisited - enhanced Sonic 3 & Knuckles
sonicretro	Star Engine/Sonic Retro Engine	Enhanced Sonic 1, 2 and Sonic CD (from Android/iOS versions)
superbroswar	Super Mario War	Open source Super Mario multiplayer game where up to four players deathmatch to stomp as many other Marios as possible to win the game
theforceengine	The Force Engine	Source port of Star Wars: Dark Forces and Outlaws
thextech	TheXTech	Open source port of Super Mario Bros. X engine
traider1	TR1X - Tomb Raider 1	TRX - Tomb Raider I & II: Community Edition
traider2	TR2X - Tomb Raider 2	TRX - Tomb Raider I & II: Community Edition
tyrian	Tyrian	Source port of Tyrian, a classic scrolling shooter
uqm	The Ur-Quan Masters	Open source port of Star Control II
vpinball	Visual Pinball	Visual Pinball X allows playing community-made pinball tables
xrick	Rick Dangerous	XRick is an open source implementation of the game "Rick Dangerous".
zc210	Zelda Classic	Open source Zelda fangame engine
