

Theme Set

This gives you the option to select a and set a new theme for your system.

Compatibility issues for themes are not unheard of, so be sure to make sure there are no reported issues on the theme you're applying.

A selection of Batocera-compatible themes can be installed through the menu **SYSTEM SETTINGS → UPDATES → THEMES**.

This menu gives you a list of themes available like:

```
[A] Fundamental - https://github.com/jdorigao/es-theme-fundamental
[I] Zoid - https://github.com/RetroPie/es-theme-zoid
[I] Carbon - https://github.com/RetroPie/es-theme-carbon
[A] Art-book - https://github.com/anthonymaccese/es-theme-art-book
```

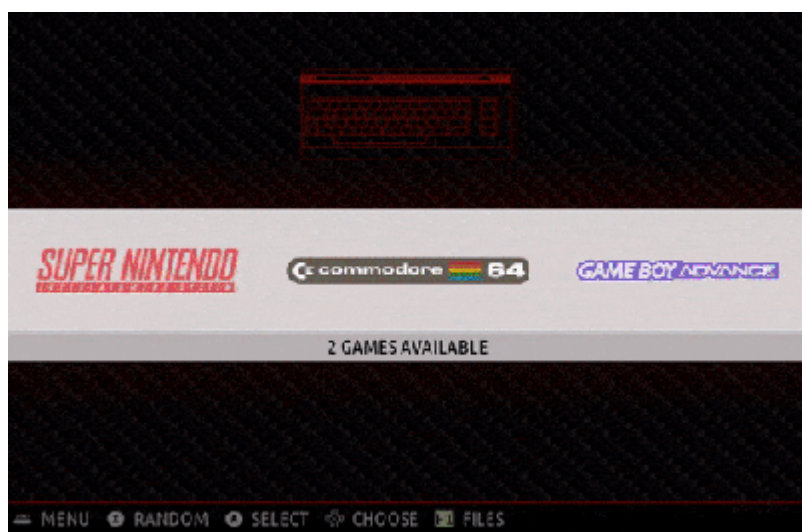

The first 3 characters indicate if the theme is:

- [A] Available for install (i.e. not installed on Batocera yet)
- [I] Installed (but can be re-installed, in case there is a new version for example)
- [?] Unknown status

You can override the default theme selection and add your own themes by writing your own `/userdata/system/themes.txt` file following this format:

Fundamental	https://github.com/jdorigao/es-theme-fundamental
Zoid	https://github.com/RetroPie/es-theme-zoid
Carbon	https://github.com/RetroPie/es-theme-carbon
Art-book	https://github.com/anthonymaccese/es-theme-art-book

It very easy from a user perspective, click on the following picture for an animated GIF describing the whole process to install a new theme and switch it on under Batocera:
