

UI mode

Enables you to have a more restricted UI with kiosk mode, or kids mode. Those restricted modes will prevent users from accessing the RetroArch menu through hotkey + B or any other modification on the system that could go wrong: editing/removing collections, changing UI parameters and so on.

Kiosk is basically a restricted mode that still let users access all the games, while **Kids** will only let users access games that have been pre-selected as safe for kids.

If you enable kiosk or kids mode, there is a “cheat code” to return to the full UI: A,A,A,B,A.
