

UI mode

Enables you to have a more restricted UI with kiosk mode, or kids mode. Those restricted modes will prevent users from accessing the RetroArch menu through hotkey + B or any other modification on the system that could go wrong: editing/removing collections, changing UI parameters and so on.

Kiosk is basically a restricted mode that still let users access all the games, while **Kids** will only let users access games that have been pre-selected as safe for kids.

If you enable kiosk or kids mode, there is a "cheat code" to return to the full UI: A,A,A,B,A. You need to enter this cheat code pretty fast, starting from the main system selection menu. When the code is entered successfully, you'll see the Batocera logo flash, indicating that EmulationStation is restarting. Also, beware if you previously swapped the A and B buttons in EmulationStation (SYSTEM SETTINGS → DEVELOPER menu).

If you are locked out, you can edit the configuration file `/userdata/system/configs/emulationstation/es_settings.cfg` and you will see a line like

```
<string name="UIMode" value="Kiosk" />
```

or

```
<string name="UIMode" value="Kid" />
```

Just remove this line, and you'll get back to full mode next time you restart EmulationStation
